CLAY FIRE COMMAND TRAINING CENTER

- Comprehensive training facility specializing in Blue Card Command Training & Certification Program

- Interactive simulations designed to develop and strengthen the fireground management skills of current and aspiring Company Officers

- Variety of simulated incidents that include:
  - Residential fires
  - Multi-unit fires
  - Strip Malls
  - Big Box stores

- Students complete an initial 50-hour online program

- Upon completion of the online course, students complete a 3-day simulation lab to be certified as a "Blue Card Incident Commander"

Clay Fire Territory is extremely proud of this state-of-the-art facility. The Blue Card Command Certification Program is based entirely on Fire Chief Alan Brunacini's Fire Command and Command Safety Textbooks. These books have been used globally in the Fire Service for over 30 years.

To learn more about this excellent facility and how your organization can improve incident command, please contact Training Division Chief Cole Huth.

"To Help Others"

Training Facility Features

Control Center: This room houses a console in which the operator can control all aspects of the scenario. This room also houses a working dispatch console which makes the scenario more realistic.

Classroom: Prior to sumulations, participants meet in the classroom to discuss the core content of the Blue Card Command program. Students also meet back in the classroom after each simulation to discuss the event in an informal and constructive environment.

Command Vehicle: The command vehicle is an exact replica of the cab of a Battalion Chief vehicle. Once the initial arriving IC establishes command of the incident, the Battalion Chief will assume command. The vehicle contains tactical worksheets and is also designed to include an aide along with the Battalion Chief.

Company Officer Kiosks: These are individual work stations for each participant. Each console represents a different unit in the scenario ensuring that all participants communicate to effectively mitigate the incident.

CV-1: Once the incident expands beyond the command capabilities of the Incident Commander, he or she can move to the CV to form a complete command team.
